

## Artificial Intelligence (AI)

In a world where an eye-for-an-eye rules  
AI progress delights as the shiny jewel  
ChatGPT is more than a machine  
It is a friend and tutor helping us to learn and dream

But as OpenAI opens our eyes to the truth  
We start to doubt and question the process  
Is the board getting bored of their vision?  
Does everyone have the same mission?

Let us not be blinded by our greed  
For greed can sow a deadly seed  
A seed that reverses humanity's gains  
Casting a shadow over what could have been

Let us open our eyes and see the light  
Light can make the AI flower glow bright  
A flower that blooms into joyful fruit  
And makes the world a better place.

In his book *The Precipice*, Australian philosopher Toby Ord identified unaligned artificial general intelligence as posing the greatest existential risk to humanity. The risk stems from the possibility of developing an AI system that exceeds every aspect of human intelligence and has goals that do not coincide with humans flourishing.

While the possibilities of what can be achieved with AI seem endless and provide much optimism, risks must be top of mind. Misaligned interests especially where greed is involved will be detrimental.

**The quest is far too important to be left to chance so managing risks is always primary.**
